

ECO-ACTION FOR THE WEEK

April 30, 2021 – Actions for Our Own Dear Planet

Transportation contributes about 14% of greenhouse gases. Aim at zero-emissions in the vehicles industry:

- **Pray** that legislators and car manufacturers take action to reduce greenhouse gases.
- **Contact** your legislators at the national and state level and ask them to provide clean, affordable and more accessible mass transit and also to expand electric vehicle charging infrastructure. These would create jobs for displaced fossil fuel workers.
- **Consider buying (or renting)** an electric or hybrid car if you must replace your current one.
- **Minimize your car's pollution:**
 - Reduce mileage by shopping locally, combining trips, sharing rides, walking or biking.
 - Do not idle.
 - Keep your tires properly inflated.
 - Change air filters regularly.
 - Use synthetic motor oil.
 - Do not exceed 65 mph — additional speed requires additional fuel.
